

POWER PACKS

Tipper Pack Spec

Our range of tipper packs have been designed to optimise the latest production technology.

The centre block is now P-T ported to allow greater functionality and is produced from a die cast block saving weight. The high quality starter is pre wired using an IP68 rated quick connect plug to allow simple and fast connection to a robust 2 button hand control.

The power packs have the option of a one piece plastic cover to protect the motor and electrical connections. Please see our power pack accessories page.

A full installation manual is available on request.
